Admin Panel Enables the Users (Depending on Roles) to manage what they have access to, Including the Super User who has access to Everything, Down below is a list of Managed Resources followed by some screen shots:

- Main Dashboard: Main Page of Admin Panel contains some Informational Widgets.
- General Settings to Manage the Site Settings (ex. Site Name_ Is site Active …).
- Payments (Manage Payments include: View, edit, delete, create and this applies to resources below).
- Reservations Management.
- Rooms Management.
- Filament Shield (Manages the permissions given to role -access to admin panel resources).
- Users, Roles and Permissions Management.

# General Settings (More options to be added)
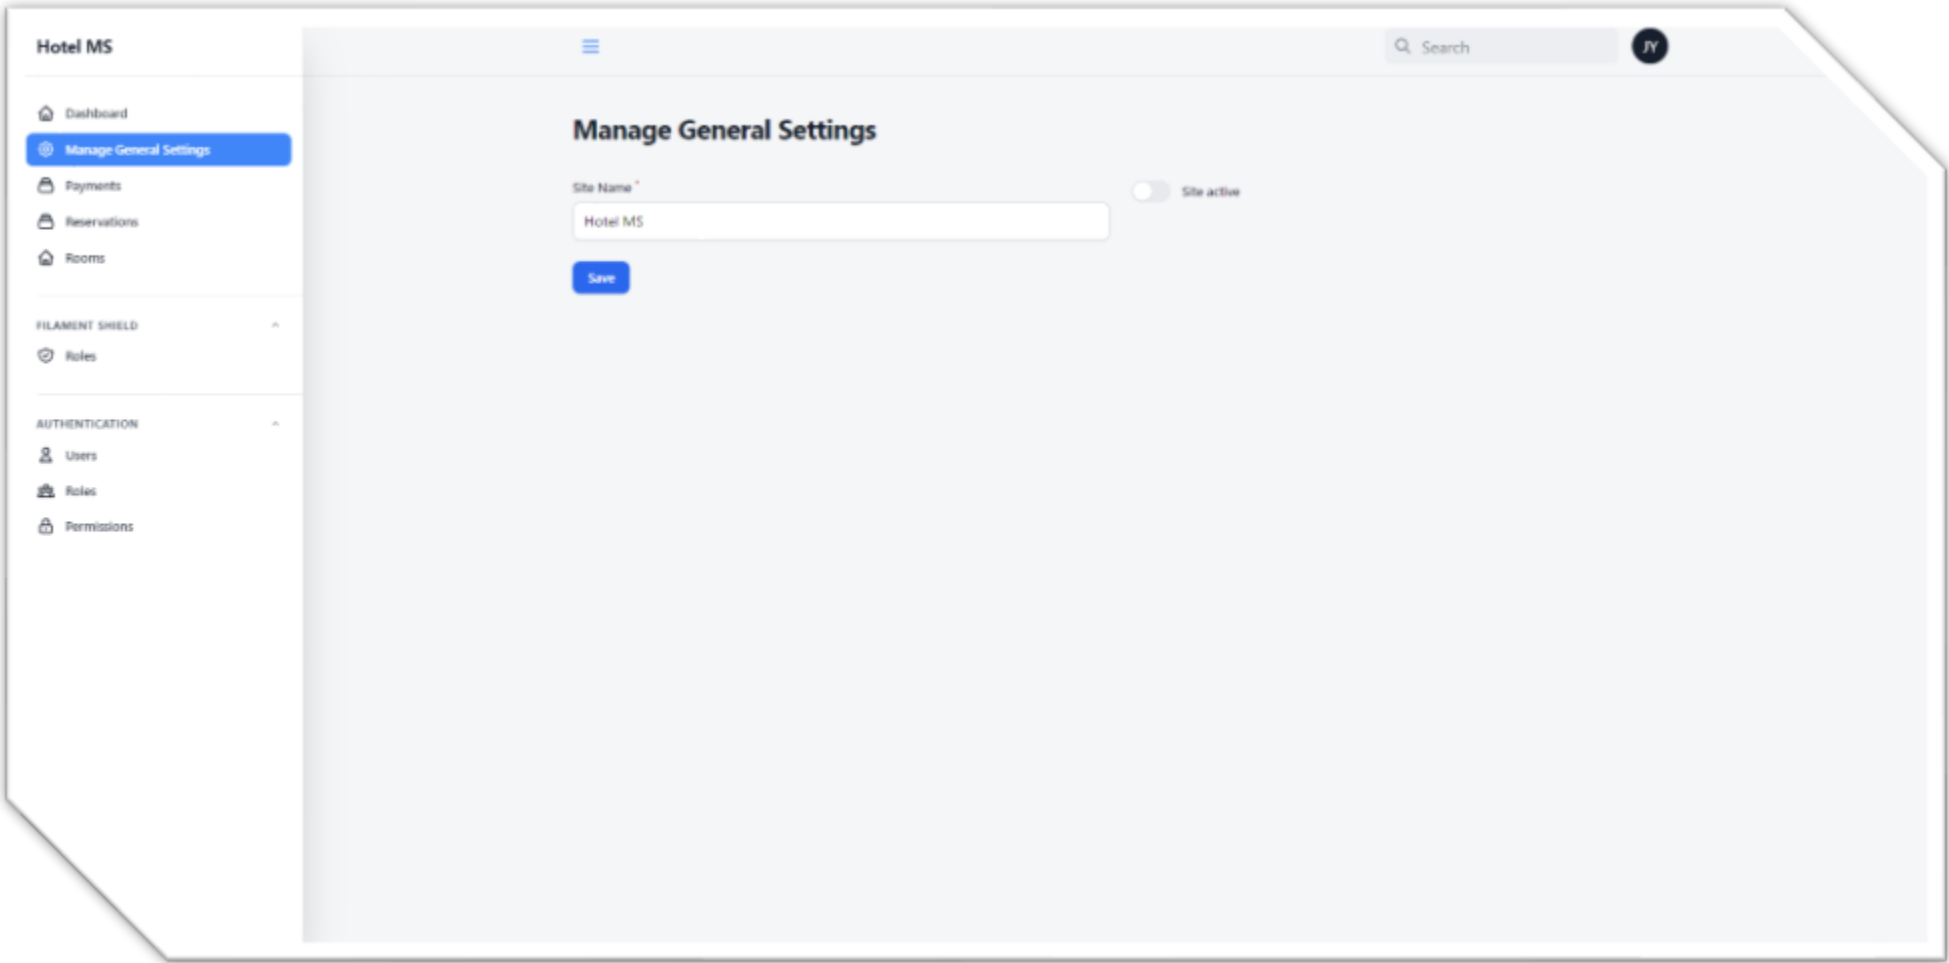

Payments Management

To Create Payment, Click on New Payments

The Payments Form Will Appear and the method is applied on the rest of resources but each with corresponding form and some with attachable relations (Like User Role Is attachable, Room shows its reservation…)

Note: if you press create you will be redirected to Edit page of created resource while if you press create and create another the resource will created, toaster will appear and form will be cleared.

Requirements : <u>composer</u> – <u>php(preferred ver.8 and up)</u> and any preferred database engine (<u>MySQL</u> – <u>MS SQL server</u> ...)

To Install the Web Application, Follow the current Steps:

Clone Repository or Download it from <u>https://github.com/jawadyazbek313/hotel-management-system/</u> then :

- Go to the folder application using `cd` command on your cod or terminal
- Run `composer install` on your cmd or terminal
- Copy .env.`example` file to .`env` on the root folder. You can type `copy .env.example .env` if using command prompt Windows or `cp .env.example .env` if using terminal, Ubuntu
- Open your .`env` file and change the database name (`DB_DATABASE`) to whatever you have, username (`DB_USERNAME`) and password (`DB_PASSWORD`) field correspond to your configuration.
- Run `php artisan key:generate`
- Run `php artisan migrate`
- Run `php artisan serve`
- Go to http://localhost:8000/

For any technical support regarding the software contact us at

jawadyazbek@gmail.com
